'HbA1c in Diabetes' is a new book edited by Stephen Gough, Susan Manley and Irene Stratton.

Using real-life case studies to illustrate actual clinical situations, the book shows you how to use mmol/mol units in daily practice. Each case study shows the old percentage units alongside the IFCC units for quick comparison. Produced in association with Diabetes UK, this pocketbook helps you work with confidence in the IFCC system.

Buy the book and read more about it here
